EMDB PRO - ASSET MANAGEMENT & PLANNING

CAPABILITIES

Flexible and easy to use, EMDB Pro provides a Cloud based asset management platform for equipment servicing and maintenance. Explore the latest in asset management delivered via the Cloud by reviewing some of the key features below.

- **Track, monitor and service:** Equipment details and audit history easily viewable via a web interface. View detailed movement and service history with one click. Track service dates and upload service reporting documentation.
- **Categorise and link equipment:** In addition to standalone equipment records, items can be linked as components. Equipment can be grouped into multilevel hierarchies and categorised.
- **Project planning and equipment utilisation:** Projects can be created to book equipment at specific dates and locations. Check-in/check-out functionality complete with barcode scanning support allow an extra level of management not seen in other systems.
- **Work anywhere with mobile and offline support:** While the EMDB Pro platform is cloud based, offline support is possible via equipment exporting. Service records can be updated offline and later synchronised. Mobile support is available through an iPad application.
- **Automated reporting and customisation:** Have detailed service reports delivered automatically via email alerting of upcoming servicing. Take advantage of end user customisation to allow for virtually any type of data to be recorded against equipment.

DIFFERENTIATORS

The EMDB Pro asset management platform offers many features not seen in other products. Take a look below and see what makes us stand out.

- **Scalable cloud based platform:** Utilising the latest in cloud technology, the system expands based on your needs. With data centers located in Australia, your data is secure.
- **Built using today's technology, not last decades:** Many other asset management systems use old technology carried over from legacy based systems. EMDB Pro uses the latest web based technologies and mobile development frameworks. The system can be used offline and with latest generation tablet and mobile devices.

AT A GLANCE

- Cloud based asset management and planning
- Detailed servicing and audit reporting
- Australian data centers with high redundancy and failover capability
- Trusted by engineering and service firms across Australia
- Mobility and offline support
- ISO 9126.2003 pending
